# Hosted Voice over IP

Get state of the art technology...  
without ever buying a phone  
system again.

## Redefining the concept of a **business phone system**

Simply Bits has made the concept of buying a phone system obsolete. There is no longer a need for you to pay to upgrade old technology to stay current, pay for changes and moves on your phone system, or pay for those costly phone system maintenance contracts. And, by using one set of wiring for both network and voice communication, you can say goodbye to that wooden board and antiquated spaghetti mess of telephone wiring in the back room.

Simply Bits maintains and constantly upgrades state of the art, standards-based voice communications technology that is inexpensive, flexible, and feature rich. Our system is obsolescence-proof because we manage the system infrastructure for you. Now even small companies can have all the benefits and features of an enterprise-class system without the challenges or expenses of owning or maintaining a traditional telephone system.

Smart!

## Hosted VoIP Bundles

### Standard Bundles Include:

1. Internet access for your business, in bandwidth increments that let you right-size the solution
2. One static IP address
3. Fully managed LAN Firewall/Router with basic Wi-Fi capability
4. One single-level IVR / Auto Attendant
5. One DID number
6. Automated Voice-User Directory
7. For each extension in the bundle:
  - SIP-based VoIP phone with Handset (Standard phone included at no additional cost)
  - Voicemail box

### VoIP Phone Benefits

- Provides advanced communications at an affordable cost
- Includes advanced features including call parking, call conferencing, direct access, dual ring, voicemail to email, and more.
- Prevents "Vendor lock-in" by utilizing standards-based technologies and hardware.
- Easily integrates into e-mail systems to create unified inbox for users containing e-mail, faxes and voicemail.
- Provides users with personal extensions, allowing customers to reach employees faster and easier.
- Has virtually unlimited capabilities for interactive voice response systems and auto-attendants.
- Integrates with other data systems in your organization.
- Allows multiple offices or locations to work together seamlessly as a single phone system without requiring special phone lines or tie lines.
- Makes add/moves/changes easy – phones can be plugged in virtually anywhere on the LAN and the phone follows the user. No more service calls to "punch down" a new phone location.
- It is simple to deploy without the need for separate phone system wiring, it plugs into your existing LAN.
