

Hosted Voice over IP

Have state of the art technology without ever buying a phone system again

Flexible Multiple Locations Affordable
 Voice Mail High Availability Roll-Over
 Intercom **Voice over IP** Dual Ring
 Auto Attendant State of the Art Call Recording
 Conference Calling

Redefining the concept of a business phone system

Simply Bits has made the concept of a phone system obsolete. There is no longer a need for you to pay to upgrade old technology, pay for changes and moves on your phone system or for those phone company maintenance contracts. Say goodbye to that wooden board with the patch panel in the back room.

Simply Bits provides a state of the art, standards-based voice communications technology which is cheaper, more flexible, and feature rich. Our system is technology proof because we manage the system infrastructure for you. Now even small companies can have a full scale system without all the headaches or expenses of a traditional telephone system.

Features Highlights

- Auto Attendant
- Interactive Voice Response (IVR)
- Voice Mail
- Unified inbox / Voice Mail to Email
- Dual ring desk phone and cell phone
- Phone line roll-over
- Direct Inward Dial phone numbers
- Conference Calling
- Intercom calls
- Multiple locations
- Custom ring groups
- Call recording

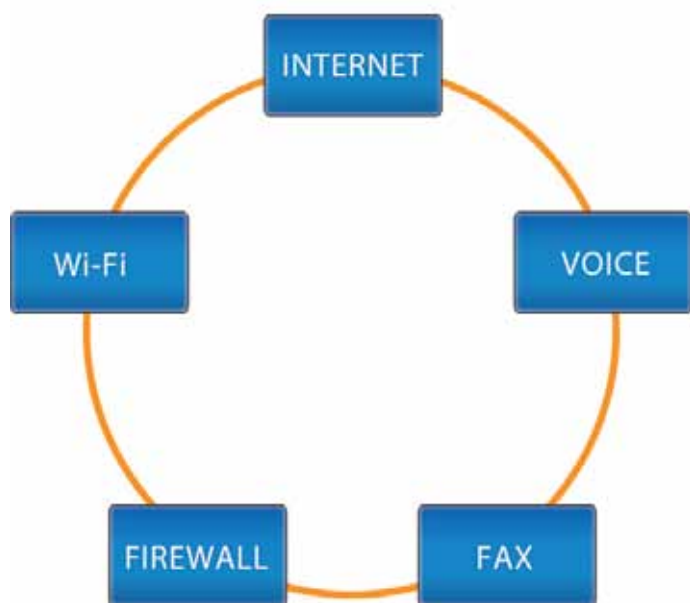

Simply Bits Hosted VoIP Solutions

Hosted VoIP Bundles

The Hosted VoIP service is a flexible system requiring no central phone system purchase by the customer. It works well for customers with multiple offices, temporary sites, more than 8 phones; those needed automatic call distribution, flexible IVR's, soft-clients, DECT6.0 Cordless SIP phones, video phones, flexible and large capacity, and more. With thousands of customers using our Hosted VoIP service, Simply Bits is taking local businesses into the future.

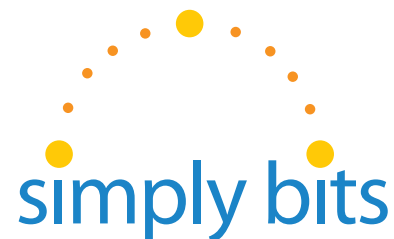

Hosted VoIP Bundles Includes The Following:

1. Managed firewall router with Wi-Fi
2. Phone service including voicemail for each extension
3. Internet access
4. 1 fax adapter to connect a standard analog fax machine.
Other fax options, including Fax To Email are available.
5. Static IP address
6. Single level interactive Voice Response / Auto Attendant
7. DECT6.0 cordless phones, operator phones and conference phones are also available for an added installation cost

VoIP Phone Benefits

- Provides advanced communications at an affordable cost
- Includes advanced features including call parking, call conferencing, direct access, dual ring, voicemail to email, and more.
- Prevents "Vendor lock-in" by utilizing standards-based technologies and hardware.
- Easily integrates into e-mail systems to create unified inbox for users containing e-mail, faxes and voicemail.
- Provides users with personal phone numbers, allowing customers to reach employees faster and easier.
- Has virtually unlimited capabilities for interactive voice response systems and auto-attendants.
- Saves cost on faxing by reducing paper and toner costs when faxes are electronically delivered to email accounts.
- Integrates with other data systems in your organization.
- Allows multiple offices or locations to work together seamlessly as a single phone system without requiring special phone lines or tie lines.
- Makes add/moves/changes easy – phones can be plugged in virtually anywhere on the LAN and the phone follows the user. No more service calls to "punch down" a new phone location.
- Allows you to use on-premise or cloud-based resources.
- It is simple to deploy, it plugs into your existing LAN.
